PROFESSIONAL SUMMARY

Final-year Computer Engineering student with hands-on production experience delivering a full-stack SaaS platform for a real client, reducing their stock management time by 60%. Comfortable across the full stack with React, Node.js, Python and PostgreSQL, and a focused specialization in AI, Machine Learning and MLOps. Holds 15+ certifications from IBM, BCG, JPMorgan Chase and DataCamp. Seeking a Junior Software Engineer role in AI/ML, Data Engineering or Full-Stack development where technical depth and fast learning translate directly into team impact.

EXPERIENCE

Freelance Full-Stack Developer MeClinic — Urgências Dentárias 24h Sep 2025 – May 2026 · Vila Nova de Gaia, Portugal

- **Engineered** a production-grade full-stack clinical management platform now deployed and used daily by clinical staff for inventory, appointments, billing and patient records.
- **Automated** physical stock control via USB barcode scanner with real-time low-stock alerts, reducing average inventory update time by approximately 60%.
- **Implemented** an integrated billing and checkout flow with atomic SQL transactions, ensuring inventory deductions and invoice generation are always consistent and never partially applied.
- **Secured** the platform with JWT authentication, Role-Based Access Control, GDPR-compliant patient data handling, bcrypt hashing, rate limiting and HTTPS/TLS encryption.
- **Delivered** automated weekly consumption reports and a real-time KPI dashboard providing management with actionable data without any manual aggregation.
- **Architected** a modular three-tier SPA (React, Node.js, PostgreSQL) designed for scalability and future SaaS commercialisation across multiple clinics.

PROJECTS

MeClinic Clinical Management & Inventory Platform Final Year Project React, Node.js, PostgreSQL, JWT, RBAC, Docker 2025 – 2026

- **Built** a SaaS-ready web application covering inventory control with barcode scanning, appointment scheduling, integrated billing, patient management, automated reporting and role-based multi-user access — fully deployed for a real client.
- **Designed** a responsive mobile-first UI with dark mode and tablet optimisation, following a Scan & Go interaction paradigm that minimises click count in high-speed clinical workflows.

Incorrupt Tamper-Proof Digital Evidence Auditing System Personal Project Node.js, Go, MongoDB, Docker, IPFS, Microservices 2025

- **Architected** a decentralized evidence management system using IPFS for immutable distributed storage and a cryptographic hash chain to guarantee tamper detection at every layer.
- **Designed** a consensus mechanism across three isolated audit nodes orchestrated via microservices, ensuring mathematical verification of evidence integrity without a central point of failure.

Personal Portfolio Website In Development Next.js, TypeScript, Supabase, Tailwind CSS 2026 – Present

- **Developing** a personal portfolio site currently live with 13 production deployments, showcasing projects, certifications and full technical profile.

TECHNICAL SKILLS

Languages	Python JavaScript TypeScript Java C Go SQL HTML CSS
Frontend	React.js Next.js Tailwind CSS Responsive Design Figma
Backend	Node.js REST APIs JWT RBAC Microservices Spring Boot IPFS Nginx PM2
Databases	PostgreSQL MongoDB MySQL Supabase SQL
AI & ML	Scikit-Learn TensorFlow Keras Deep Learning MLOps NLP LLMs Prompt Engineering GenAI
DevOps	Docker Git GitHub Agile OWASP GDPR HTTPS/TLS

EDUCATION

Bachelor's Degree in Computer Engineering Universidade Lusófona — Centro Universitário Porto Sep 2023 – May 2026 (Expected) · Porto, Portugal

- **Relevant coursework:** Algorithms & Data Structures, Distributed Systems, Software Engineering, Computer Networks, Databases, Operating Systems, Object-Oriented Programming.
- **Final Year Project:** MeClinic, a full-stack clinical management platform built in partnership with a real dental clinic, now in daily production use.
- **Activities:** AE ULP Student Association.
